

RUBY NODES

**RUBY TOUGHNESS
NODE PRECISION**

From validators to RPCs, we build the backbone of Web3 – with unmatched performance, uptime, and scale.

THE ESSENCE OF RUBY NODES

Founded in the depths of a bear market, Ruby Nodes has become one of the most trusted tech partners in web3 infrastructure.

With our own bare metal servers across continents, we support over 25 networks – but our expertise stretches far beyond.

We provide validator infrastructure, dApp development, trader infrastructure, custom tooling, and seamless integrations for DeFi, storage, and more.

PROBLEM STATEMENT

We Run the Nodes That Power Web3

Over 25 blockchain networks—from Ethereum and Solana to L2s—depend on our bare metal server infrastructure. We operate our own hardware across multiple continents, not cloud providers with single points of failure.

We own and operate our infrastructure. From day one, we built for reliability—because the projects that last need infrastructure that doesn't break.

Why Teams Choose Us

Most node providers rent servers from AWS or Google Cloud. When those providers have issues, everyone goes down together.

Your validators stay online. Your dApps stay responsive. Your users stay happy.

Finally, cost savings are the real reason teams switch. Our partners regularly cut RPC expenses by tens of percent, gaining unmatched value without sacrificing speed or reliability.

KEY STATS

Uptime	99.99%
RPC requests per month	10 million +
Secured value	\$ 100 million +
Major outages since launch	None
Active validators	25 +
Data stored	60 TB +

WHAT WE OFFER

Validator Services

Running validators on 25+ networks and earning staking rewards, all while keeping full custody of your tokens.

Protocol Services

Comprehensive node operations for blockchain projects: testnet validators, indexers, RPC endpoints, and storage solutions. We handle the infrastructure so you can focus on building.

Private Infrastructure

Custom setups for trading desks, arbitrage bots, and confidential operations — secure, dedicated, and performance-driven.

Apps & Tooling

Trading tools, DeFi integrations, and blockchain tooling built by engineers who understand protocols at the code level.

LET'S BUILD TOGETHER

We're looking to partner with blockchain projects that need infrastructure they can depend on. If you're building something that requires 24/7 uptime and can't afford to go down, let's talk.
